## To Whom It May Concern

On behalf of the Iran Renewable Energy Association (IrREA), we cordially invite you to the **9th Iran International Conference & Exhibition (IranREC2025)**, taking place on **May 24-25, 2025**, at the Milad Tower International Conference Center in Tehran, Iran.

Despite Iran's **abundant** renewable energy resources, the country is currently facing critical challenges in balancing its electricity supply. In response, the Iranian government has introduced ambitious policies and regulations aimed at enhancing its renewable energy capacity by an additional **30,000 MW** of wind and solar energy within the next five years. To achieve these objectives, attracting foreign investment is essential. Recent regulatory amendments have facilitated financing options, including allocations of up to **5 million dollars** for renewable energy project implementation.

At IrREA, we are committed to fostering international collaboration to advance the renewable energy sector. IranREC2025 will serve as a key platform for such collaboration, uniting investors, companies, and experts from around the world. The event offers numerous benefits to attendees, including:

- **Gain valuable insights:** Learn from industry leaders and explore the latest technologies.
- **Forge new partnerships:** Discover potential collaborators and explore joint venture opportunities.
- **Expand your reach:** Access the rapidly growing Iranian renewable energy market.
- **Network with key actors:** Connect with government agencies, leading companies, and professionals in the field.
- **Showcase your expertise:** Exhibitors can display their products and services to a targeted audience.

Furthermore, IrREA has considered several initiatives to encourage international participation in IranREC2025:

1. Waived registration fees for participants from government sectors.
2. Exclusive discounts for groups of participants from the private sector.
3. Special discounts on accommodation.
